LIST OF CONTENTS

VOLUME 38

NUMBER 1

R. J. Gerth and **W. M. Hancock** — **1** Computer aided analysis for improved process control

K. H. Lee and **H. Woo** — **21** Direct integration of inverse engineering and rapid prototyping

W. Ferrell Jr., J. Sale, J. Sams and **M. Yellamraju** — **39** Evaluating simple scheduling rules in a mixed shop environment

F. Güder and **J. L. Zydiak** — **67** Fixed cycle ordering policies for capacitated multiple item inventory systems with quantity discounts

S. B. Graves, D. C. Murphy and **J. L. Ringuest** — **79** Acceptance sampling and reliability: the tradeoff between component quality and redundancy

M. Ebrahimi and **R. Whalley** — **93** Analysis, modeling and simulation of stiffness in machine tool drives

J. Park, J. Park and **J. Kim** — **107** A generic event control framework for modular flexible manufacturing systems

I. Lee and **M. J. Shaw** — **125** A neural-net approach to real time flow-shop sequencing

S. Kumar, T. P. Bagchi and **C. Sriskandarajah** — **149** Lot streaming and scheduling heuristics for *m*-machine no-wait flowshops

Y.-B. Park — **173** A solution of the bicriteria vehicle scheduling problems with time and area-dependent travel speeds

Y. Park, S. Kim and **Y.-H. Lee** — **189** Scheduling jobs on parallel machines applying neural network and heuristic rules

J. Kidd — **203** The networked management of strategic alliances: Oriental and Occidental perceptions

NUMBER 2

D. Kim and **V. A. Mabert** — **215** Cycle scheduling for discrete shipping and dynamic demands

H. E. Garcia — **235** Operational analysis and improvement of a spent nuclear fuel handling and treatment facility using discrete event simulation

T. S. S. Srinivasa Rao and **U. C. Gupta** — **251** Performance modelling of the *M/G*/1 machine repairman problem with cold-, warm- and hot-standbys

T. K. Keyser and **R. P. Davis** — **269** Statistically assessing distributed computing approaches

W. H. Ip, Y. Li, K. F. Man and **K. S. Tang** — **283** Multi-product planning and scheduling using genetic algorithm approach

Z. Zhu and **R. B. Heady** — **297** Minimizing the sum of earliness/tardiness in multi-machine scheduling: a mixed integer programming approach

S. Tunali and **I. Batmaz** — **307** Dealing with the least squares regression assumptions in simulation metamodeling

NUMBER 3

M. Hasan, T. AlKhamis and **J. Ali** — **323** A comparison between simulated annealing, genetic algorithm and tabu search methods for the unconstrained quadratic Pseudo-Boolean function

K.-C. Jeong and **Y.-D. Kim** — **341** Heuristics for selecting machines and determining buffer capacities in assembly systems

D. A. Koonce and **S.-C. Tsai** — **361** Using data mining to find patterns in genetic algorithm solutions to a job shop schedule

A. Kuyumcu and **A. Garcia-Diaz** — **375** A polyhedral graph theory approach to revenue management in the airline industry

R. J. Linn, W. Zhang and **Z.-y. Li** — **397** An intelligent management system for technology management

G. W. DePuy and **G. E. Whitehouse** — **413** Applying the COMSOAL computer heuristic to the constrained resource allocation problem

NUMBER 4

H.-G. Kim and **B. M. Rao** — **425** Expected warranty cost of two-attribute free-replacement warranties based on a bivariate exponential distribution

H.-S. Yan — **435** Hierarchical stochastic production planning for flexible automation workshops

P. L. Abad — **457** Optimal lot size for a perishable good under conditions of finite production and partial backordering and lost sale

S. Balakrishnan, N. Popplewell and **M. Thomlinson** — **467** Intelligent robotic assembly

D.Tang, L. Zheng, Z. Li, D. Li and **S. Zhang** — **479** Re-engineering of the design process for concurrent engineering

E. Pratsini — **493** The capacitated dynamic lot size problem with variable technology
